📍 No.44, Bu-Ali Ave, Dowlatabad Industrial Town, Isfahan, Iran

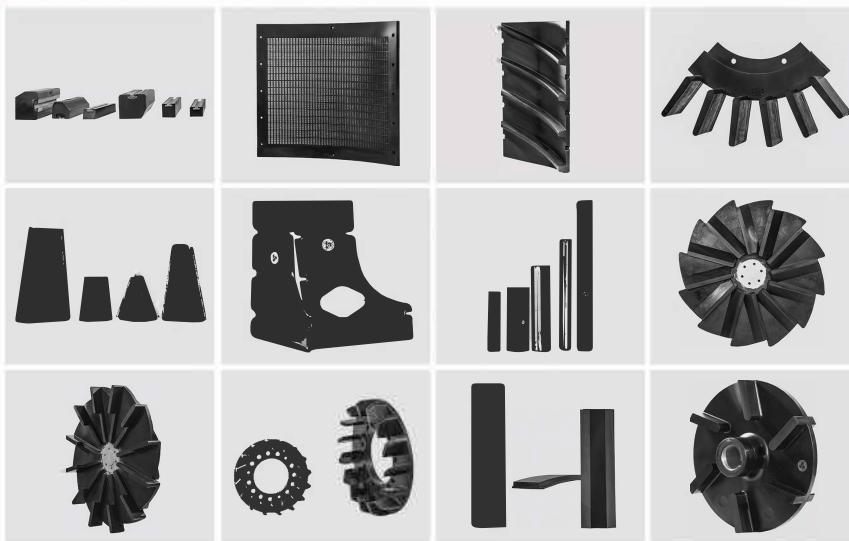

Pars Rubber Products Co. includes the following department:

- ▶ Sales and Orders Department
- ▶ Design and Engineering Department
- ▶ Laboratory
- ▶ Production Unit
- ▶ Quality Control Department
- ▶ Product Inspection Department
- ▶ Central Warehouse
- ▶ Raw Materials Warehouse
- ▶ Turning Department
- ▶ Rolling Department

Pars Rubber Products Co. with more than 50 years of successful experience in production of rubber parts in accordance with the international standards has been able to produce locally the polymers needed by different industries, such as petroleum, gas, steel, papermaking, textile, and petrochemical industries as well as mines and mining industries. Access to latest technologies, modern machinery, and skilled and efficient staff, besides holding ISO 9001, R&D, and ISO/EIC 17025/2017 certificate have made this company a fully-equipped and advanced industrial group in the field of producing rubber parts, with an annual capacity of 50,000 tons.

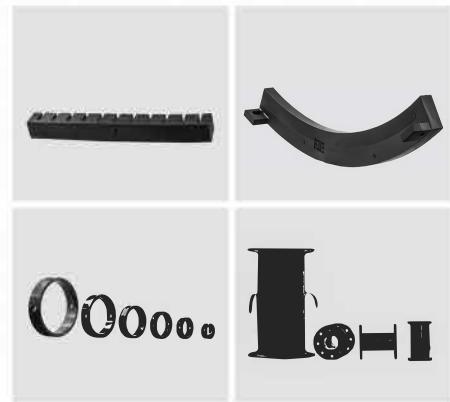

PRODUCTS OF PARS RUBBER CO

Production Unit is an important and fundamental department of pars Rubber Industrial complex, which is regarded the main core of this factory . This department produces rubber parts in different from and colors using raw materials such as Viton-NBR and Neoprene-Silicon/SBR/NR/NBR-FPM-EDM-CR with diverse formulations for different applications and working conditions, such as gas, industrial oils, and chemicals (different solvents, acids, and bases), as well as ozone-resistant, sour gas resistant, saltwater resistant, and mineral resistant parts.

Considering the growing progress of technologies in the world, design and engineering units and laboratories are regarded the most important sections of an industrial complex. Pars Rubber Products Co. uses computer facilities complying with the international standards, and the most advanced laboratory equipment to perform the required quality tests on raw materials and final products.

The laboratory is equipped with mixer, roller, laboratory press, rheometer, hardness tester, and IRHD, and is capable of performing tensile, bending, wear, compression, elasticity, and adhesion tests as well as immersion tests in different fluids and gasses and hardness control tests.

Pars Rubber Products

Using advanced up-to-date machinery, Pars Rubber Products Co. is able to produce a collection of different rubber parts such as different types of o' rings, packings, buffers, bellows diaphragms, radial shaft seals, industrial gears, y seals, ring seals, rotors, stators, impellers, rubber profiles, rubber linings for pipes, flanges, and reserve tanks. The company also produces high quality wear resistant mining parts including load lifters, shell plates, head plates, manhole plates, and screens as well as ball mill parts, different polyurethane parts, sleeves, segments, and hydrocyclone parts. Accordingly, all necessary technical engineering, structural, and quality assurance measures are taken to avoid potential inconveniences in production and delivery of the parts and assure efficient delivery of the customers' projects.
